# SITS & WIGGLES

The Newsletter of the Animal Clinic of Chardon

WHAT'S INSIDE THIS ISSUE:

*What is Chronic Kidney Disease in Cats?*

*New Service - Specialized Care Boarding*

*Dog Day of Summer 2023*

*It's Hot Out!*

## WHAT IS CHRONIC KIDNEY DISEASE (CKD) IN CATS?

Chronic Kidney Disease (CKD) describes the gradual loss of kidney function over time. The kidneys normally filter waste products out of the blood. The waste is then excreted, or released, in the urine. Cats with CKD have kidneys that are not functioning properly. So, the waste products accumulate in their bloodstream and they suffer from symptoms of this illness. CKD occurs over a period of time and can be deadly for cats.

### What Causes CKD in Cats?

The cause of CKD is usually difficult to determine. Damage to the nephron, the kidney unit that filters the blood, is usually irreversible and progressive. Many different diseases can cause Chronic Kidney Disease. If your veterinarian cannot determine a definite cause, it is called "idiopathic kidney disease."

Some common causes of Chronic Kidney Disease are:

- Certain toxins, like lilies and antifreeze
- Genetic abnormalities
- High blood pressure
- Lack of blood supply leading to the kidneys
- Infections
- Cancer
- Immunologic diseases

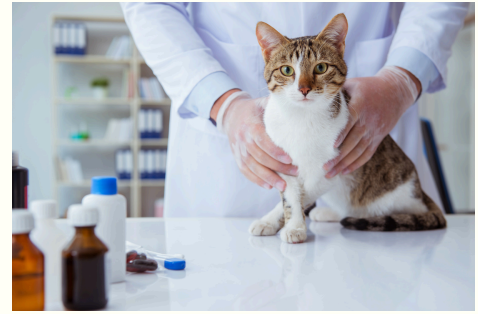

Sometimes the cause of CKD can be specifically treated, but most of the time the changes in the kidneys are permanent. By partnering with your veterinarian, it may be possible to slow down the progression of CKD and achieve a good quality of life for your cat. *(Continued on next page)*

# WHAT IS CHRONIC KIDNEY DISEASE (CKD) IN CATS? (CONTINUED)

## Signs & Symptoms

Cats with CKD typically do not show any signs of illness until the kidneys have lost two thirds of their functional ability. At that point, the following signs are often observed:

- Weight loss and thin body condition
- Increased thirst and more urine being produced in the litter box
- Diminished appetite
- Lethargy

## Testing

Annual or bi-annual check-ups are the best way for you to find out if your cat has early signs of CKD. Your cat's current weight is compared to previous weights. The veterinarian asks about your cat's appetite, urine output, and water consumption. A yearly blood and urine tests help your veterinarian determine if your cat has abnormal values that suggest CKD. There is a new test now available that can help your veterinarian spot kidney disease sooner. Urine cultures help the veterinarian determine if they need to prescribe an antibiotic for an infection that may play a part in your cat's CKD. Your veterinarian measures your cat's blood pressure. This helps them identify and guard against problems such as vision loss and stroke.

## Treatment and Management

Dietary management may slow the progression of CKD. Although there is some controversy as to when dietary intervention should start and what diet to use. You and your veterinarian can determine if your cat needs a dietary change and which diet to use. Medications are available to treat problems such as low potassium levels and poor appetite. If your cat needs improved hydration, your veterinarian can teach you how to give supplemental fluids underneath the skin of your cat. This can help extend the duration and quality of life. Treating CKD is a partnership between you and your veterinarian. Regular evaluations help refine treatments and identify new problems early when they are easier to resolve. Although CKD cannot be cured, many cats with CKD live with good quality of life for an extended period of time, often years. *Written by Dr. Paige Garnett, DVM*

Happy 4th of July!

**Save 10% on a one-time order**

Use code: **10PATRIOTIC**

Use code 10PATRIOTIC - valid for a one-time purchase through our online store. Compounded medications not included. Other restrictions apply. Valid 7/1/23 - 7/31/23

Happy 4th of July!

**Save 15% on your first AutoShip order**

Use code: **15INDEPENDENCE**

Use code 15INDEPENDENCE - valid for a one-time purchase through our online store. Compounded medications not included. Other restrictions apply. Valid 7/1/23 - 7/31/23

Soak up the savings

**Save 17%**

Use code: **17SUMMERTIME**

Use code 17SUMMERTIME - valid for a one-time purchase through our online store. Compounded medications not included. Other restrictions apply. Valid 7/1/23 - 7/31/23

## New Service Available - Specialized Care Boarding

We now offer Specialized Boarding Care for those pets that need a little more attention and care. If you plan on boarding with us, please read our [Specialized Care Boarding information sheet](#).

## Book Ahead

Our appointments are going fast!  
Please make you pet's wellness visit at least 6 weeks in advance.

## It's Hot Out!

Don't Leave Your Pet in the Car!

A car can overheat **even** when the window has been left cracked an inch or two.

Young, overweight or elderly animals, or those with short muzzles or thick or dark-colored coats are most at risk for overheating.

Shady spots offer **little** protection on hot days, and move with the sun.

90°

Even if the temperature outside is only 70°, the inside of your car may be as much as 20 degrees hotter!

102°

On an 85° day, it only takes ten minutes for the inside of your car to reach 102°.

120°

Within just 30 minutes, the car's interior can climb from 85° to a scorching 120°.

Many states and local governments have laws that prohibit leaving an animal unattended in a motor vehicle under dangerous conditions, which includes hot days. Your car could be damaged or you could be charged with a crime.

ASPCA

If you see an animal trapped in a car on a hot day, try to locate the owner or call 911! **Stay by the car until assistance arrives.**

## DOG DAY OF SUMMER

Join us for the Dog Day of Summer.  
Vendors, contests, and fun for you and your dog!

When: Saturday, July 15th from 2 - 5 pm  
Where: Chardon Square/Gazebo

*I saw a neighbor talking to her cat today, it was hilarious that she thought her cat could understand her.*

*I went home and told my dog.*

## ACOC Birthdays
